

## Quality grades | Poplar

### I AB

Where face may be visible, ideal for all types of finish (plating, clear varnish, satin finish etc.) Only a few pin knots or sound, tight ones without cracks are allowed. Very small patches, or well-made repairs where color remains consistent with the rest of the surface are also allowed

### II B

"Natural" face with color variations and sound knots no longer than 10 mm in diameter, suitable for pigmented paints or lacquers. Small knot holes or hairline cracks are allowed, provided they are well-filled patched

### III BB

"Closed" face, putty-filled, suitable for uses where face is not visible. Sound, tight knots up to a diameter of 30 mm are allowed; also allowed loose knots, well filled cracks and color variations

### IV C

Plywood suitable for packaging or similar uses. All natural wood features (knots, cracks, etc.) are allowed, along with various processing defects, as long as they do not compromise the functionality of the panel (for example: fungus growth and iron/mineral inclusions are not permissible)
